How can I get the character used as decimal separator on the os?

It's possible to retrieve this info using from isCOBOL the classes:

java.text.DecimalFormat
java.text.DecimalFormatSymbols

Here is a simple isCOBOL sample source:

```
program-id. prg.configuration section.repository. class j as "java.text.DecimalFormat"
class j2 as "java.text.DecimalFormatSymbols"working-storage section.77 var pic x any le
ngth.77 w-j object reference j.77 w-j2 object reference j2.procedure division.main.
   set w-j to j:>new() set w-j2 to w-j:>getDecimalFormatSymbols() set var to w-
j2:>getDecimalSeparator() display "Decimal separator is: " var. stop run.
```
