

How do I specify isCOBOL, Java or application properties on the command line?

Author: Veryant Support

To specify properties for isCOBOL, Java or the application server on the java, iscc, isrun, iscrun, isserver or iscsrv command line, use the -J-D option.

For instance:

```
iscc -J-Discobol.compiler.const.const1=1 PROG1
```

```
iscrun -J-Discobol.tracelevel=15 -J-Discobol.logfile=mylog.txt PROG1
```

A special case is passing memory configurations to the JVM. Because you don't need to send the value to the runtime framework, you would skip the -D option.

For example:

```
iscrun -J-Xmx512m PROG1
```
