The compiler options that cannot be specified in the source file with the >> IMP OPTION directive are:

```
-rw, -rc, -sf, -st, -sa, -cv, -stl
```

For example, the following syntax will NOT suppress the reserved word YYYYDDD:

```
>> IMP OPTION "-rw=YYYYDDD"
```

Instead, to remove YYYYDDD as a reserved word add -rw=YYYYDDD to your compiler command line, or specify it using the `iscobol.compiler.options` property. For example,

```
iscc -rw=YYYYDDD myprog.cbl
```

or add the following line to your properties file:

```
iscobol.compiler.options=-rw=YYYYDDD
```

For vCOBOL replace `iscc` with `vcc` and `iscobol.compiler.options` with `vcobol.compiler.options` in the above examples.
