

Does isCOBOL support traditional Printer Reporting?

Author: Veryant Support

Saved From: <http://support.veryant.com/support/phpkb/question.php?ID=175>

The more traditional and general printer reporting is the ability to define an output file that further directs its output to a printer or spooler and be able to OPEN OUTPUT such file to start the report and print whatever header and detail text thru standard WRITE stmts (including the ability to advance lines and pages). This is fully supported.

Then there is an IBM reporting syntax that is also supported by isCOBOL, please contact Veryant support to get more detailed information about this specific type of reporting.
