

Can I call from an isCobol program a stored procedure?

Calling a stored procedure from isCOBOL is rather simple, since the supported ESQL includes the CALL statement. You should just write something like:

```
EXEC SQL
```

```
CALL procedure_name (:param1, :param2) into :result
```

```
END-EXEC
```

Where param1 and param2 and result are host variables defined in the Data Division of the program.
