When you get this error:

"No X11 DISPLAY variable was set, but this program performed an operation which requires it."

It means that is COBOL is trying to access the AWT/SWING GUI Interface and your system doesn'; that.

If your program doesn';t have a GUI interface, you can try to set this property in your run command line:

```
iscrun -J-Djava.awt.headless=true ...
```

or

java -Djava.awt.headless=true ...

If your cobol program includes some textual ACCEPT/DISPLAY statements, you'; Il need to use isCOBOL';s CHARVA toolkit by adding a ';-t'; switch to your command line:

```
iscrun -t ...
```

This automatically sets this configuration variable needed to activate CHARVA:

iscobol.guifactory.class=com.iscobol.gui.client.charva.GuiFactoryImpl
