The parameters must be added to the end of the URL and they are received by the COBOL program as chaining parameters.
 For instance, this URL:

```
http://localhost:8180/wd2/zk/IsMainZK?PROGRAM=MYPROG&PARAM=ABCDEFGHILMN123456789
```
 will pass the value "ABCDEFGHILMN123456789" to the COBOL program that contains this code:

```
   ...
       WORKING-STORAGE SECTION.
       01 hlink.
          05 p1 pic x(3).
          05 p2 pic x(9).
          05 p3 pic 9(4).
          05 p4 pic 9(5).
   ...
      PROCEDURE DIVISION chaining hlink.
   ...
```
