

Did you know you could set properties to configure the PDF'S generation while printing?

To configure attributes of program-generated PDF files, isCOBOL provides the op-code "WINPRINT-SET-ATTRIBUTE" into the "WIN\$PRINTER" routine.

Starting from the 2016R1 release, you can achieve the same result using configuration properties.

```
iscobol.print.attribute.=value
```

For example, to set the compression of images inside PDF file, you can use the following call inside the COBOL program

```
call "win$printer" using winprint-set-attribute
                        "JPEG"
                        50
```

Or you can add the following property into the configuration file

```
iscobol.print.attribute.jpeg=50
```
