

How do I specify which file status codes I want to use?

Author: Veryant Support

You can choose which file status codes you want to use by setting the `iscobol.file.status` runtime framework property

```
iscobol.file.status
```

This property specifies which file status codes to use. Set it to one of the following values:

```
com.iscobol.io.FileStatusDefault (for 2002 file status codes)
```

```
com.iscobol.io.FileStatus85
```

```
com.iscobol.io.FileStatus74
```

```
com.iscobol.io.FileStatusDG
```

```
com.iscobol.io.FileStatusVax
```

```
com.iscobol.io.FileStatusIBM
```

```
com.iscobol.io.FileStatusMF
```

```
com.iscobol.io.FileStatusMS
```

For example, for RM/COBOL-85 (ANSI 85) codes set `iscobol.file.status=com.iscobol.io.FileStatus85`

Note for Java programmers: This property specifies the name of the class that handles the file status code. To create a custom set of file status codes, the class must implement the "com.iscobol.io.FileStatus" interface.
