How to install just c-treeRTG's ODBC client without having to use the full installation setup

c-treeRTG includes an ODBC driver that can be installed on Windows machines.
It gives ODBC-compliant applications such as Microsoft Excel access to your c-tree data.

The ctree installation setup is very large and often you will only want to install the ODBC client on the customer's machine.
There is a smaller setup available for just installing c-tree's ODBC client.
After installing ODBC on one machine from the larger setup, you will find this smaller ODBC-only setup in c-tree's redist folder, as seen in the screenshot below:
