

How do I set iscobel.file.index.FileName with variable file name assignments?

Question:

The ASSIGN TO name in my SELECT statement is a variable.

How can I set iscobel.file.index.FileName in the properties file when the file name is determined by the program at run time?

Answer:

The solution is to set the iscobel.file.index.FileName property programmatically. For example,

```
... 77 file-name pic x(100). 77 property-name pic x(100). ... string
"file.index.", file-name delimited by spaces into property-
name. set environment property-name to "easydb".
```

Notice that when you set an isCOBOL property using the SET verb, you do not specify the "iscobel." prefix in the variable name.
