How do I set up isCOBOL Server (Application Server) and Thin Client?

Author: Veryant Support
Saved From: http://support.veryant.com/support/phpkb/question.php?ID=1

Start the server using one of the following command lines:

```
iscserver -port port -hostname server
java com.iscobol.as.AppServerImpl -port port -hostname server
```

-port and -hostname are optional.

Start the client using one of the following command lines:

```
isclient -port port -hostname server MYAPPMAIN
iscclient -port port -hostname server MYAPPMAIN
java com.iscobol.gui.client.Client -port port -hostname server MYAPPMAIN
```

To get information about the server startup and client connections, add the following to your properties file used for server startup:

```
iscobol.as.logging=true
iscobol.as.logfile=/home/homedir/iscobol.as.logfile.txt
iscobol.as.authentication=0
java com.iscobol.gui.client.Client -hostname server -port port ASA$INFO
```
