Question:

I got a file status 9D when trying to use c-treeRTG. Where can I get additional information? Where are the file status codes documented?

Answer:

To find additional information, create a log file for the c-tree client.
 If you are using ctree.conf to configure c-tree, add the following to the end of ctree.conf;

```
yes
yes
```

 If you are using an isCOBOL configuration file (ex: iscobol.properties) add these three variables to your properties file:

```
iscobol.file.index.log.file=/mylog.txt
iscobol.file.index.log.error=1
iscobol.file.index.log.info=1
```

 The log file contains c-treeRTG error codes. You can read more information about them in isCOBOL';s documentation under "Troubleshooting", then "Error Codes" in the c-treeRTG for isCOBOL manual, or directly from Faircom';s documentation using the link in the "External References" section of the same manual.
