

How can I preload some data files inside the APK generated by isCOBOL mobile?

To make this you need:

- to create the data folder under isCOBOL IDE project's HTML folder
- to copy it inside the data file
- to change the property `iscobol.file.prefix` inside the `iscobol.properties` file under resources folder of the isCOBOL IDE project in this way

```
iscobol.file.prefix =/mnt/sdcard/Android/data//files/
```
